

# Emergency Laparoscopy

## Is there a Role?

---

1. There is absolute no role for emergency laparoscopy
2. Small number of selected cases
3. Large number of selected cases

# Emergency Laparoscopy my Practice

---

1. None

2. Very few selected cases

3. Moderate to large number of selected cases

# Emergency Laparoscopy

## Technique (if to be performed)

---

1. Always open technique
2. Always closed (Veress needle) technique
3. Selective approach

# Emergency Laparoscopy

In Small Bowel Obstruction (adhesion related)

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy

In Small Bowel Obstruction (not adhesion related)

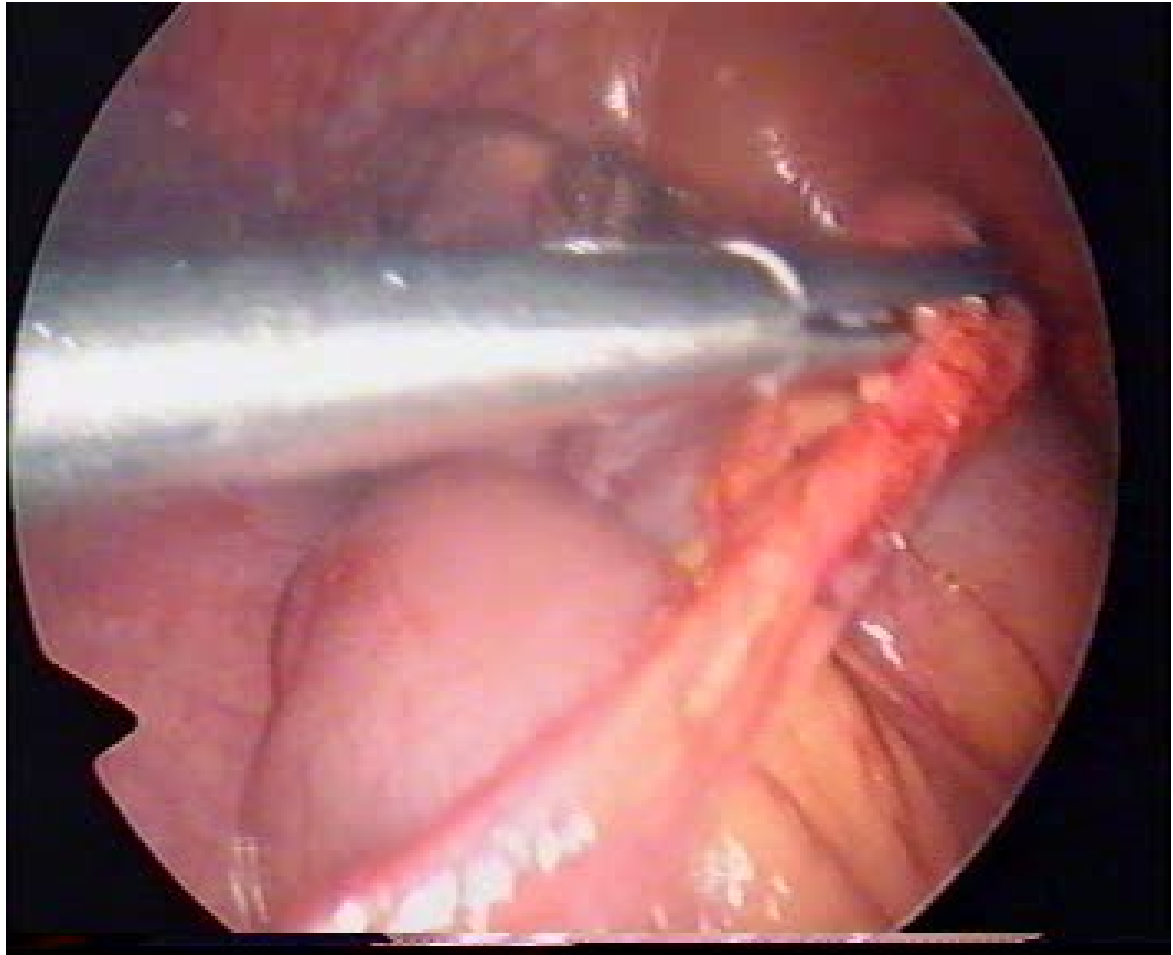

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy

In Small Bowel Obstruction (not adhesion related)

# Emergency Laparoscopy In Large Bowel Obstruction

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy In Peritonitis of Unknown Origin

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy In Perforated Duodenal Ulcer

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy

## In Perforated Duodenal Ulcer - my Practice

---

1. None
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy In Perforated Diverticulitis

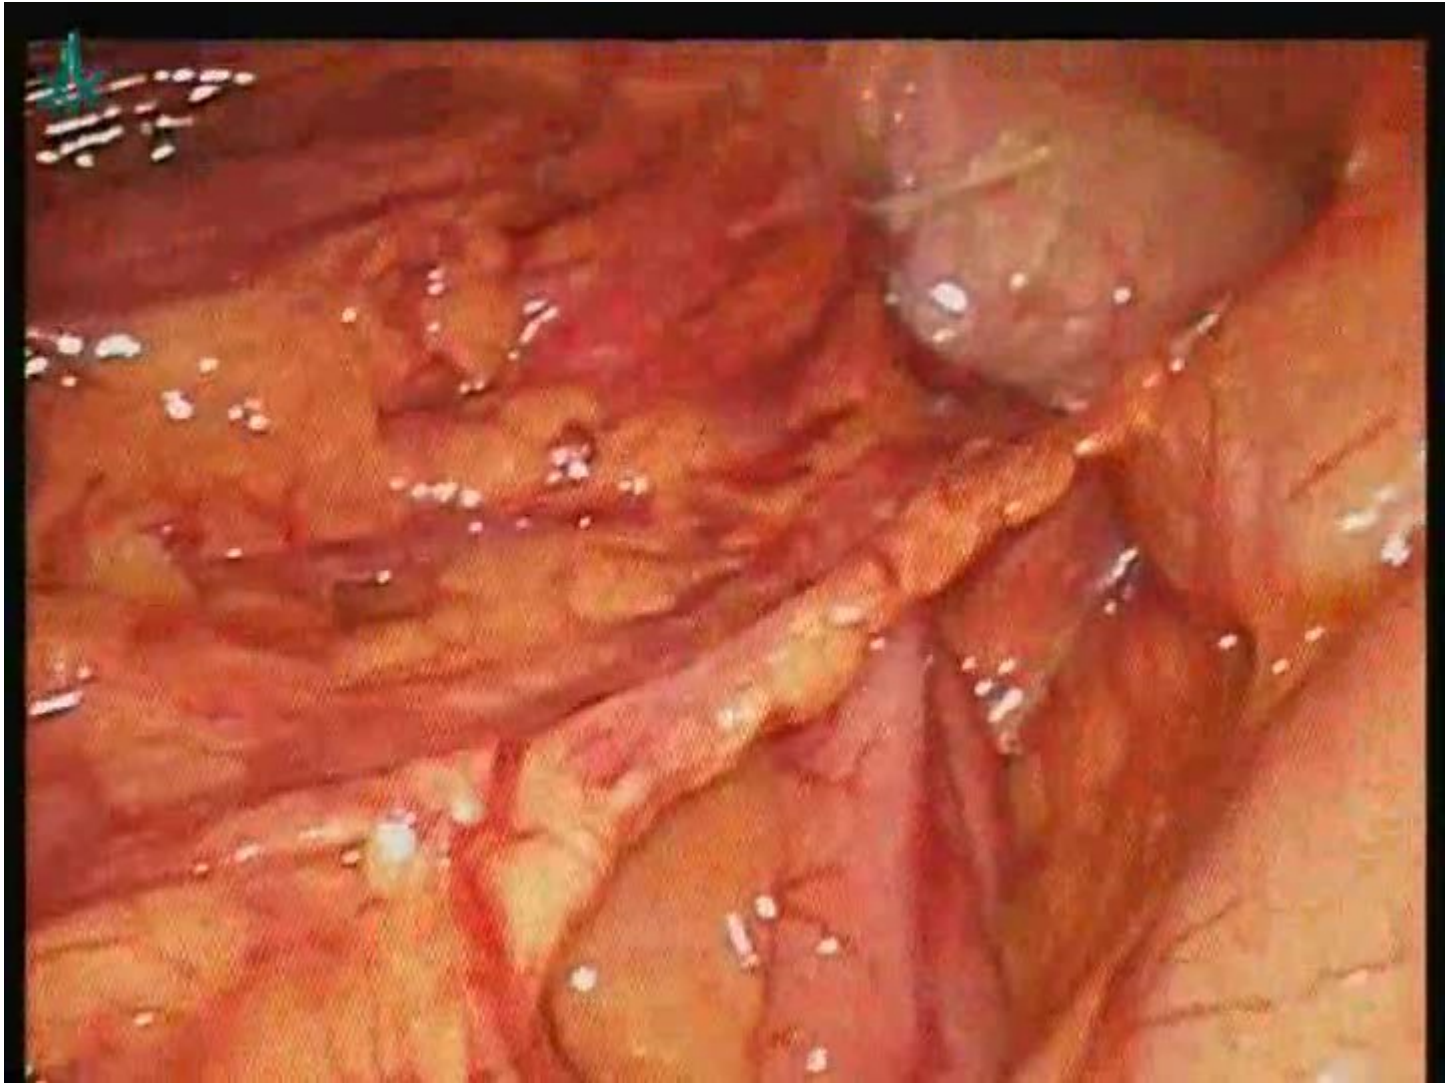

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy In Perforated Diverticulitis (If Performed)

---

1. Resection +/- Abscess drainage
2. Abscess drainage only

# Emergency Laparoscopy In Colonoscopic related Perforation

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy

## In Acute Appendicitis – my Practice

---

1. None
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy

## In Perforated Appendicitis – my Practice

---

1. Yes
2. No
3. In selected cases

# Emergency Laparoscopy In Penetrating Lower Chest Trauma

---

1. Yes
2. No
3. In selected cases

# Emergency Laparoscopy In Abdominal Stab Wound

---

1. Yes
2. No
3. In selected cases

# Emergency Laparoscopy In Abdominal Shrapnel Injury

---

1. Yes
2. No
3. In selected cases

# Emergency Diagnostic Laparoscopy

## Bed Side / ICU

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

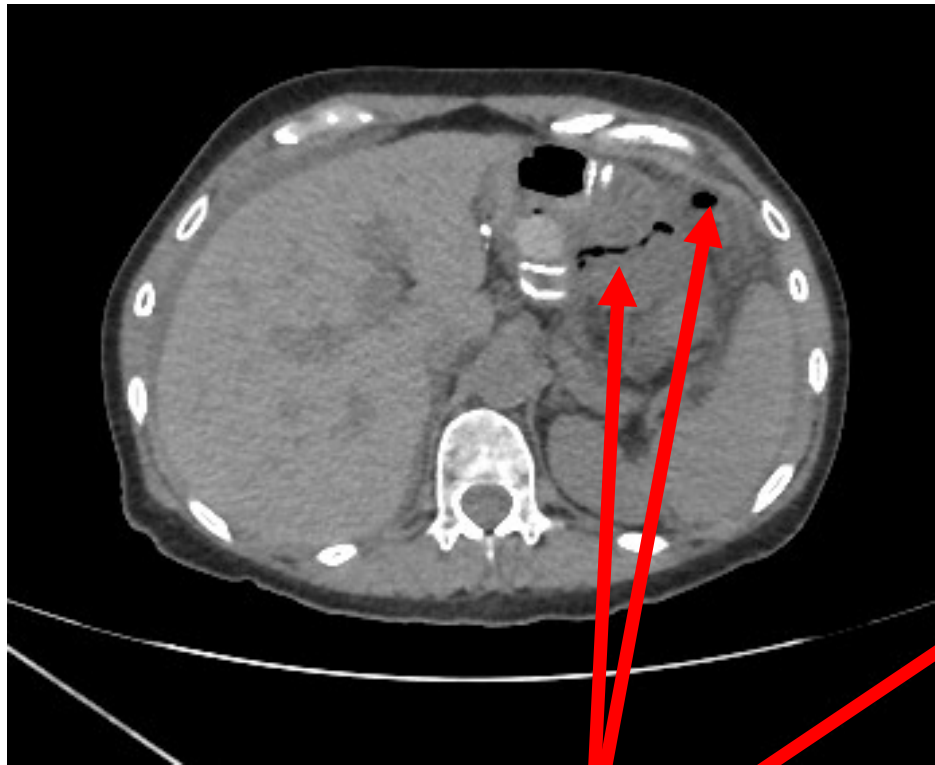

# Emergency Laparoscopy

## for Postoperative Complications – Bariatric Surgery

---

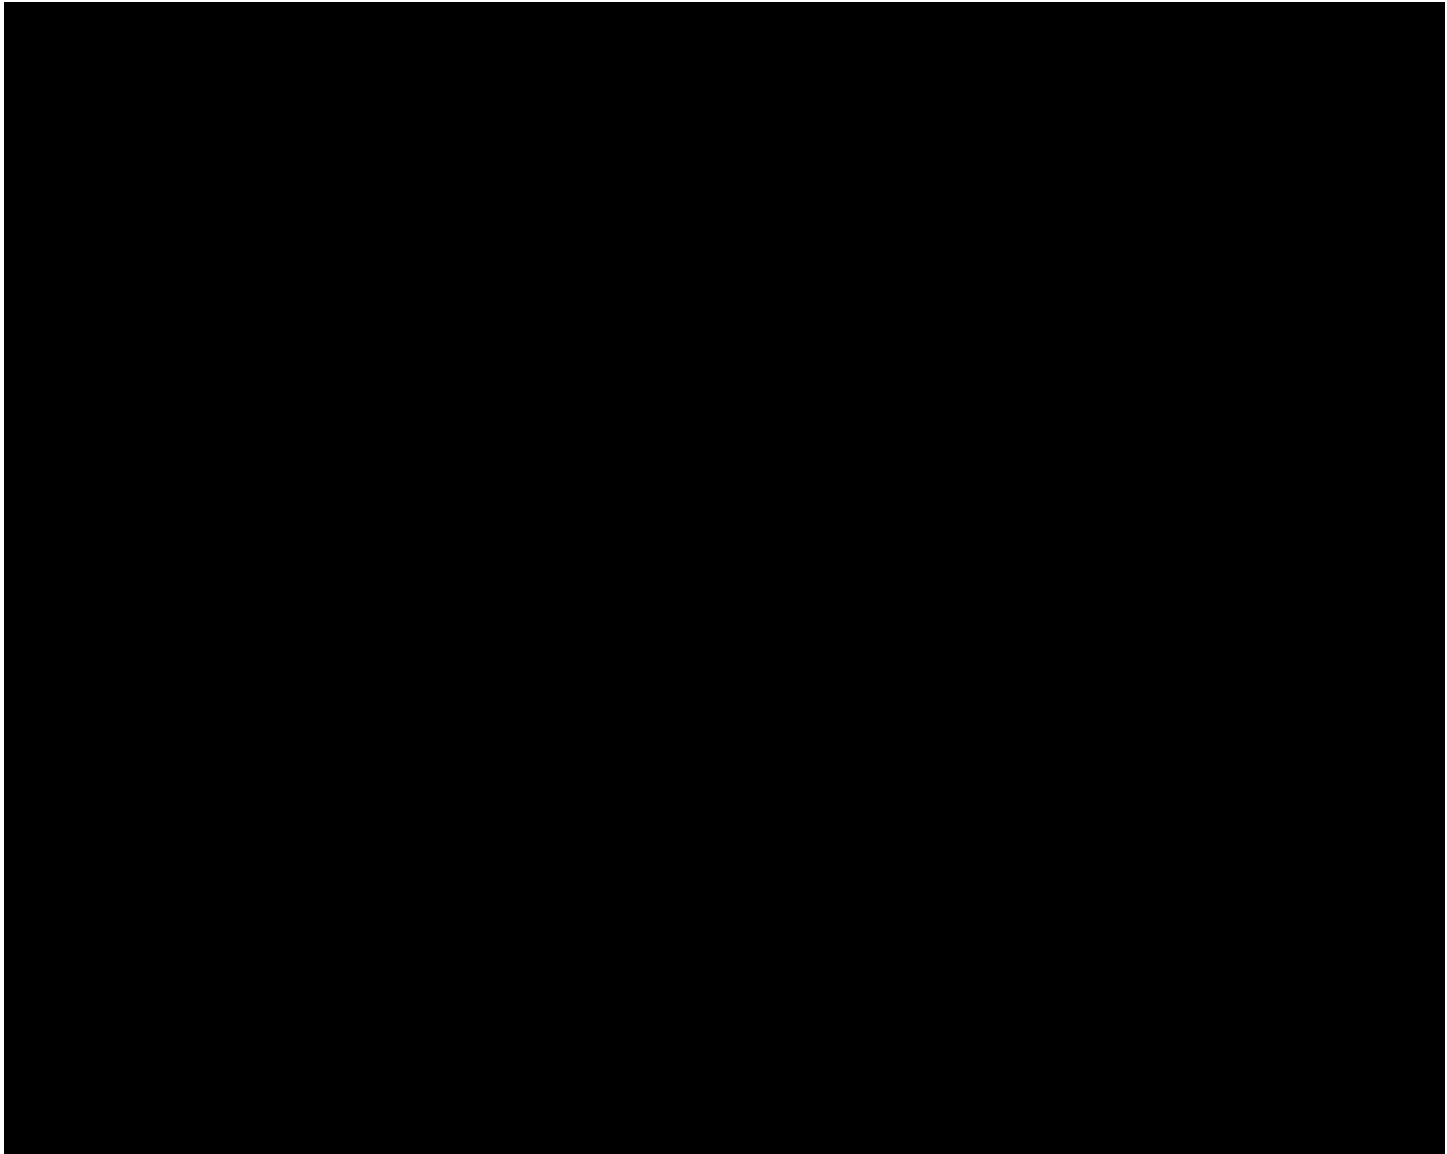

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Acute epigastric pain one year post LRYGB

# Emergency Laparoscopy

for Postoperative Complications – Anastomotic Leak

---

1. There is absolute no role
2. Minority of selected cases
3. Majority of selected cases

# Emergency Laparoscopy

## Is there a Role?

---

1. There is absolute no role for emergency laparoscopy
2. Small number of selected cases
3. Large number of selected cases
